

CALCULATOR SAVINGS POTENTIAL

Calculate your savings potential with macmon NAC

Thanks to its functions and automated systems, macmon NAC provides enormous potential for administrative savings. A simple checklist makes different savings opportunities for customers immediately transparent, including the administrative effort to be saved in man-days and the resulting financial advantage. But calculate yourself! Simply enter with your macmon consultant your savings potential in minutes per month based on your current network scenario and calculate your personal savings potential per year:

Checklist savings potential*	Minutes* per month	Man days* per year	Savings potential per year**
