

macmon NAC and ManageEngine — Efficient Integration for Even Greater Network Security

Integration between macmon NAC and Endpoint Management Tools from ManageEngine provides a clearer overview and enhanced control over endpoints connected to the company network

Berlin, February 3rd, 2020: macmon secure GmbH is based in the heart of Berlin and has been developing network security software since 2003. As an international provider of network access control solutions, the company is now able to **integrate with the successful software solutions ManageEngine Patch Manager Plus and ManageEngine Mobile Device Manager Plus**.

This enables macmon NAC to gain a unique insight into the compliance status of endpoints that are trying to connect to the network. Integration with ManageEngine Patch Manager Plus allows macmon to access **detailed information about software updates and potential weaknesses in endpoints** before they are added to the company network. Integration with ManageEngine Mobile Device Manager Plus also provides macmon NAC with **detailed information about mobile endpoints**.

In both cases, this very precise information is used in **real time** and can help to enforce company security policies for all endpoints connected to the network. A non-compliant device is thus denied access to the network or allowed access only to an isolated segment of the network. This helps to avoid potential threats from unpatched or outdated endpoints.

“The integration with ManageEngine enables us to use detailed information from these tools and to ensure that all endpoints that connect to the company network comply with the company's specific security policies,” explains **Boris Bischoff, Technical Marketing Manager at macmon secure GmbH**. Bischoff adds: “From a technical and commercial perspective, macmon NAC and the ManageEngine products are both excellent **alternatives to the more complex and expensive enterprise solutions** available on the market. They can also be implemented very quickly. That also makes them an ideal solution for medium-sized companies in our international sales markets.”

macmon

ManageEngine

Great Relevance for International Markets

Chuck Cohen, Managing Director at IREO, a leading value-added distributor that sells both ManageEngine products and macmon in Spain and Portugal, confirms: “This integration is good news for our customers, as it provides detailed information about the status of the endpoints before they can access the actual network and thus offers better control over the devices after connection.” This integration also offers great potential for the Italian market. Both solutions can be obtained from the value added distributor Bludis.

About IREO

IREO is a distributor of IT solutions that supports partners in expanding their business through added value and differentiation. The company is a leading provider of handheld and service solutions with an extensive portfolio of innovative solutions in the fields of security, networks, systems and services (ITSM).

About macmon secure

macmon secure GmbH — the German technological leader for network access control

The experienced IT experts have been offering manufacturer-independent, BSI-certified solutions since 2003. These solutions protect heterogeneous networks against unauthorized access through immediate network transparency. macmon is quick and easy to implement and offers considerable added value for the network security. macmon can be integrated with other security solutions from international technology partners, such as endpoint security or firewalls. Customers obtain an immediate network overview with graphical reports and topology view. In addition, macmon offers customers and partners an extensive training program and 24/7 support from Germany. This makes macmon a key IT component in the areas of digitization, BYOD or Intent-based networking.
