

**macmon secure GmbH expands into the Czech Republic with a new distributor****VUMS DataCom, Prague, provides wide-ranging expertise in the field of IT security**

Berlin, May 13th 2020: macmon secure GmbH, a leading expert in network security solutions, is continuously expanding its international distribution network. Having already expanded into Southern Europe and Scandinavia, the company is now officially represented in the Czech Republic with its distributor VUMS DataCom. In preparation for this new partnership, four VUMS DataCom experts visited Berlin at the end of 2019 for comprehensive on-site training in the macmon Network Access Control (NAC) solution.

**Interface with Greenbone provides appealing added value for VUMS DataCom customers**

According to **Ondřej Desenský** from VUMS DataCom: "Over the past twenty-plus years, our company has built up a strong team of experts with IT security being one of our main areas of expertise. One of the solutions we rely on most heavily is the Greenbone Security Manager (GSM) from Greenbone Networks. This solution identifies security gaps in a company's IT systems and evaluates their potential risk. macmon offers excellent interface capabilities with other leading security products, including Greenbone. macmon NAC allows Greenbone Security Manager to scan new endpoints for malware when they enter the corporate network and it regularly evaluates their compliance status to efficiently protect the network. We are confident that this will enable us to offer significant added value to our customers."

**macmon NAC smart is ideal for small and medium-sized Czech enterprises**

Christian Bucker, Managing Director of macmon secure GmbH, adds: "In autumn 2019 we introduced macmon NAC smart. This appealing solution is specially tailored to the needs of small and medium-sized enterprises. This enables us to serve an important market niche in the Czech Republic with excellent potential in the SME sector. With VUMS DataCom's many years of experience in the field of IT security and their extensive sales network, we expect to achieve quick results."

VUMS DataCom expects significant interest in the network security sector in the coming months, as the coronavirus crisis has brought the topic of IT security to the fore. The Prague-based IT experts provide consulting focused on the zero-trust model, a security concept based on the principle of not trusting any device, user or service both inside and outside one's own network.

It requires extensive measures to authenticate all users and services and to monitor network traffic. For that reason, **Ondřej Desenský** believes that “macmon will be the perfect addition to our portfolio here in Prague.”

**About macmon secure GmbH:**

**macmon secure GmbH — the German technological leader for network access control**

The experienced IT experts have been offering manufacturer-independent, BSI-certified solutions since 2003. These solutions protect heterogeneous networks from unauthorized access through immediate network transparency. macmon is quick and easy to implement and offers considerable added value for network security. macmon can be integrated with other security solutions from international technology partners, such as Endpoint Security or firewalls. Customers obtain an immediate network overview with graphical reports and topology. In addition, macmon offers customers and partners an extensive training program and 24/7 support from Germany. This makes macmon a key IT component in the areas of digitization, BYOD or intent-based networking.
