Restorepoint – new macmon technology partner

Berlin, January 25 2018 – Christian Bücker, Managing Director of macmon, is happy to report that macmon secure GmbH is welcoming another technology partner: "Our strategy is aimed at connecting macmon Network Access Control (NAC) with leading security solutions to enable our customers to really reap the benefits of this technology. The solution we have developed ourselves not only provides our customers with the best defense against unauthorized network access – macmon NAC can also be seamlessly integrated into other security products."

According to Gartner, a network failure in a large company results in a loss of 4600 € per minute on average. Restorepoint, the product of the British company with the same name founded in 2008, makes it possible to create backups and carry out recovery functions for various products centrally while archiving those backups chronologically and restoring them. This prevents recovery tasks becoming complex and significantly reduces downtimes and the costs associated with them. In addition, it is possible to automatically analyze compliance configurations and automate changes to the network media, security media and storage media.

Thanks to the direct connection to macmon, the configuration and installation of the macmon appliance are time-controlled and run automatically. To supplement macmon's own solution for creating and storing backups, Restorepoint follows a central approach to enable a quick reaction in times of crisis. This joint solution is available on the market.

"Restorepoint's high degree of automation and the focus on ease of operation are completely in line with macmon's philosophy of offering our customers intelligent and simple solutions for current and future challenges in network security," comments Bücker.

On the assets Restorepoint is adding to macmon, Rob Billington, UK Country Manager, macmon secure, said: "Ensuring network 'up-time' along with automation and ease of deployment and use fits perfectly with the macmon ideology of how network technology needs to be delivered to organisations of all sizes. Restorepoint understand that network technology has to not only be multi-platform but have simple integration, because that is what clients need. Relationships with companies like Restorepoint prove our commitment to making life easier for our clients. Having open APIs is key to our ethos but being able to align technically with our partners extends this to being able to deliver out of the box integration, this in turn allows us to reduce significantly the time between installation and benefiting from deliverable benefits and cost savings."

About macmon:
The company is manufacturer of an independent and modular NAC solution who protects the network against unauthorised and unsecured devices, as well as internal attacks. Customers benefit from macmon's security know-how, predictable costs and an increased level of security, gained from determining exactly which devices are allowed on which segments of a network. The software features ease of use, integration with other leading security products, and ongoing development to keep it in line with the latest standards. The customer base includes international companies of various branches and sizes.

The headquarters of macmon secure GmbH are located in Berlin, Germany.

macmon secure is a member of the Trusted Computing Group and actively participates in various research projects.
